YEAR: Final Year

1. Introduction:

The Student Enrollment & Course Management System (SECMS) is a Salesforce-based application designed to manage student, course, instructor, and enrollment information efficiently. The system streamlines the enrollment process, supports course and instructor management, provides validation and approval processes, and generates reports and dashboards for better academic management.

2. Problem Statement:

Educational institutions may face difficulties in managing student information, course details, instructor assignments, and enrollment processes manually. Manual data entry can lead to incorrect or duplicate records, delays in enrollment approval, and difficulty in accessing accurate reports. Managing course availability, student enrollment, payments, and academic information through separate processes can also increase administrative work.

3. Solution:

The proposed solution is to develop a Salesforce-based Student Enrollment & Course Management System that centralizes student, course, instructor, and enrollment information. The system uses Salesforce custom objects, fields, relationships, page layouts, validation rules, flows, approval processes, reports, and dashboards to streamline academic management.

- Centralized student, course, instructor, and enrollment data management
- Structured course and student information using Salesforce objects and relationships
- Validation rules to reduce incorrect data entry
- Automated enrollment-related processes using Salesforce Flows
- Approval process for enrollment management
- Reports and dashboards for academic and enrollment analysis
- Secure and scalable cloud-based data management

4. Objectives:

- To manage student information in a centralized Salesforce application.
- To manage course details and instructor information efficiently.
- To simplify the student enrollment process using Salesforce automation.
- To improve data accuracy using validation rules and structured records.
- To support enrollment approval and related academic processes.
- To provide reports and dashboards for better decision-making and monitoring.

5. PHASES OF DEVELOPMENT:

The development of the Student Enrollment & Course Management System is divided into the following phases:

3.1 Ideation Phase:

- Identify the problems faced in student, course, instructor, and enrollment management.
- Prepare the problem statement.
- Create an empathy map to understand user needs.
- Brainstorm possible solutions.
- Select a Salesforce-based application as the proposed solution.

3.2 Requirement Analysis Phase:

- Identify functional and non-functional requirements.
- Define student, course, instructor, and enrollment requirements.

- Define system requirements such as object creation, relationships, validation, enrollment processing, approval, reports, and dashboards.
- Define security, reliability, performance, availability, and scalability requirements.

3.3 Project Design Phase:

- Design the proposed Salesforce solution.
- Define student, course, instructor, and enrollment data management.
- Design relationships between the major objects.
- Design validation rules, flows, approval process, reports, and dashboards.
- Define the system architecture with presentation, application, data, and analytics layers.

3.4 Project Planning & Scheduling Phase:

- Create the project backlog and sprint schedule.
- Divide development into multiple sprints.
- Assign tasks and story points.

- Plan activities such as object creation, fields, relationships, automation, reports, and dashboards.

3.5 Project Development Phase:

- Create the Salesforce Developer Account.
- Create custom objects and tabs.
- Develop the Lightning application.
- Configure fields, relationships, page layouts, and record types.
- Implement validation rules and formula fields.
- Create Salesforce Flows for automation.
- Configure the enrollment approval process.
- Create reports and dashboards.

3.6 Testing Phase:

- Test student, course, instructor, and enrollment record creation.
- Test data entry and validation rules.

- Verify relationships between objects.
- Verify page layouts and record types.
- Test Salesforce Flows and automated processes.
- Test the enrollment approval process.
- Test reports and dashboards.

3.7 Deployment & Conclusion Phase:

- Complete the Salesforce application configuration.
- Verify that all major functionalities work correctly.
- Analyze the benefits and limitations of the system.
- Identify future enhancements such as online payment integration, student notifications, mobile support, advanced analytics, and AI-based academic insights.

Advantages and Disadvantages:

1. **ADVANTAGES:** Centralized Data Management – Student, course, instructor, and enrollment information can be managed in one system.
2. **Reduced Manual Work** – Automation reduces repetitive data entry and administrative processes.
3. **Improved Data Accuracy** – Validation rules help prevent incorrect data entry.
4. **Faster Enrollment Processing** – Enrollment records can be managed and approved through Salesforce.
5. **Real-Time Analytics** – Reports and dashboards help administrators analyze enrollment and course data.
6. **Secure Data Management** – Salesforce provides controlled access to application data.

DISADVANTAGES:

1. **Salesforce License Required** – The application depends on Salesforce availability and licensing.
2. **Internet Dependency** – The cloud-based system requires an internet connection.
3. **Learning Curve** – Administrators may need basic Salesforce knowledge to maintain the application.

Conclusion:

The Student Enrollment & Course Management System successfully provides an organized Salesforce-based solution for managing students, courses, instructors, and enrollments. The system reduces manual work, improves data accuracy through validation and structured records, supports enrollment approval and automation, and provides reports and dashboards for better academic analysis.

Overall, the Salesforce-based application offers an efficient and scalable approach for managing student enrollment and course-related processes.

Future Scope:

- AI-based student performance and course recommendation.
- Online payment and fee management integration.
- Automated SMS, email, or WhatsApp notifications.
- Mobile application support.
- Advanced enrollment and academic analytics.
- Multi-department and multi-campus support.
